Disarmament

Since the birth of the United Nations, the goals of multilateral disarmament and arms limitation have central to its efforts to maintain international peace and security. The UN has given highest priority to reducing and eventually eliminating nuclear weapons, destroying chemical weapons and strengthening the prohibition of biological weapons – all of which pose the most dire threats to humankind. While these objectives have remained constant over the years, the scope of deliberations and negotiations has changed as political realities and the international situation evolved. The international community continues to consider more closely the excessive and destabilizing proliferation of small arms and light weapons and has mobilized to combat the massive deployment of landmines – instruments that threaten the economic and social fabric of societies and kill and maim civilians, all too many of whom are women and children. The UN is also focusing on the impact of new information, telecommunications technologies and other emerging technologies on international security.

Research & Documentation

  
  Transparency in armaments builds confidence between countries, and can help determine whether excessive or destabilizing accumulations of arms take place. Being open about armaments may encourage restraint in the transfer or production of arms, and can contribute to preventive diplomacy. Since its inception in 1991, the United Nations Register of Conventional Arms has received reports from more than 170 States. The vast majority of official transfers are captured in the Register.

  
  National implementation of the Security Council resolution 1540 (2004) to refrain from supporting non-State actors from developing, acquiring, manufacturing, possessing, transporting, transferring or using nuclear, chemical or biological weapons and their delivery systems.
